

# Cornerstone Supply Chain Practice

# Whether you see disruption as a threat or an opportunity, supply chain planning needs to be agile.

As we navigate through a more volatile, uncertain, complex, and ambiguous world, being able to model any scenario is critical as is the ability to rely on data that can provide real-time scenario planning. Bridging the gap between data, technology platforms, and process is a critical enabler for decision making by business leaders, demand planners, supply planners, and operations across the organisation.

Platforms that are fit for their intended purpose for your sales, marketing, workforce planning, and operations, but typically fall short of providing the flexibility to reveal the insights that are needed to deal with the pace and depth of change in supply chain management.

But what if you could:

- Leverage your data sources in real time to enable better decisions?
- Perform scenario planning in at the Leadership team table when those decisions are being made?
- Improve collaboration between customers, suppliers, and cross-functional silos
- Provide accurate cash flow projections that are aligned with budget across the planning horizon

**It's possible.**

## Get the right inputs at the right time for better supply chain planning across your business

- As supply chain processes become more complicated, streamlining them is key to efficient growth
- The ability to dynamically adjust and execute plans in response to fluctuating market conditions is essential to streamline supply chain management
- With constantly changing market conditions, the ability to sense shifts in demand and to respond on a near-real-time basis is critical
- Linear supply chain operations processes need to be replaced by connected planning processes that empower dynamic value-based decision-making

# Working with the Cornerstone Supply Chain Practice

The modern supply chain is evolving at an unprecedented pace, and flexibility, agility, and responsiveness are more important than ever.

Cornerstone's Supply Chain Practice is a highly experienced team of SMEs, consultants, and certified platform specialists that have real-world experience and practical knowledge of the critical challenges that impact demand and supply planning.

We deliver industry best practice planning solutions that allow our customers to reengineer their supply chain to improve forecast accuracy, DIFOT, working capital investment, and reduce operating costs.

## Leverage practical, real-world industry and technical expertise

Our team has worked across a wide scope of industries across Australia and Asia Pacific, which gives our clients the benefit of global knowledge paired with local insights, for example:

- Pharmaceutical
- Logistics and Transport
- Mining
- Electronics
- Manufacturing
- Food and Beverage Production
- Automotive
- Retail
